

AllThatStats NOW

for the first time: ready to support unforgettable live presentations

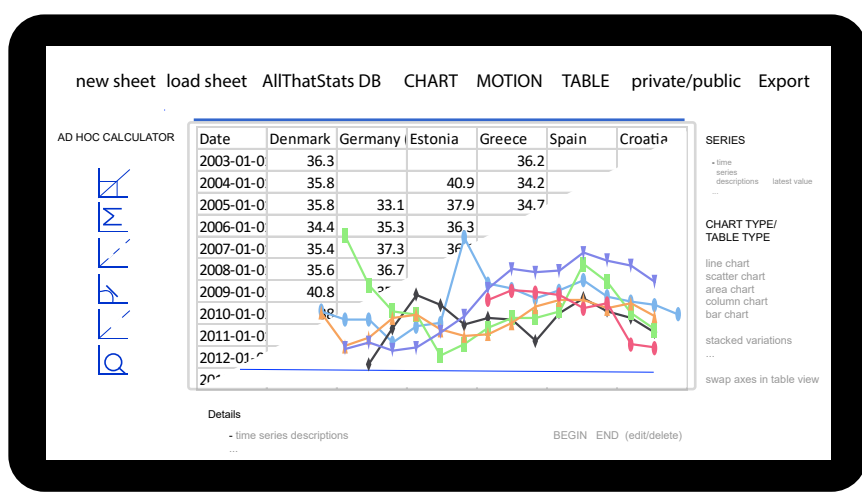

AllThatStats NOW (ATS-NOW) is a time series analysis, presentation & publication service by DSI

It aims to provide statistical analysis capabilities and interactive time series visualisations ready for (live) presentations, publications and external modeling.

OVERVIEW

ATS-NOW is part of the AllThatStats database (ATS DB) environment and controls data retrieval, direct data access and the management of personal user defined data selections.

inspire your audience with ad hoc analyses and motion charts

Time series selections from AllThatStats and other third party sources can be collected/imported into sheets and stored in your personal ATS-NOW account for repetitive usage.

store data sheets for repetitive usage in your personal data library

All data sheets associated with an AllThatStats database (ATS DB) are automatically and constantly compared with the data status of the respective source and thus always show the latest data available.

Export sheets: sheets can be exported into Excel- or CSV-format for any further usage outside ATS-NOW, e.g. more demanding calculations, modelling or publication work.

Export charts: charts can be exported directly from ATS-NOW (SVG, PNG) to be implemented on websites, or included in publications.

Share data: sheets can be shared with the public (e.g. students, colleagues) directly at ATS-NOW (read only).

run live presentations

The use of ATS-NOW in a live performance makes lectures even more interesting. All functionalities can be controlled directly via touch screen. Previously prepared data sheets can be called up immediately to be presented in charts motion charts or tables.
